

Answers

- 1) How many nodes were used in the intermediate layer and why?
There are 5 intermediate nodes. Since there is no definite way of constructing a neural network, we could say that the weka program is choosing it based on the average of the number of nodes in the network.
- 2) What is the terminating condition?
The terminating condition is minimum error rate.
- 3) What is learning rate used?
The learning rate used is 0.3
